

Lynx Hold-Over 2 Reticle Dimensions

Revision 1.1. Copyright ©2009 Lynx Optics.

Hold over points are fine and may be difficult to see if the reticle is not correctly focussed for your eye:

Turn the eyebell of the scope anti-clockwise until it stops, then look through the scope at a well lit featureless area such as a nearby wall or cloudless sky - the object of the exercise is to see nothing but the reticle through the scope. You should see a very unsharp reticle. Now without looking through the scope, give the eye bell a couple of clockwise turns at a time. After each adjustment look away from the scope or close your eyes for a moment to relax them and prevent them from bringing the reticle into focus prematurely. This action should be repeated until the reticle immediately appears crisp and sharp at a quick glance. It may be necessary to check and re-adjust the focus if the scope is being used by another person or if your eyesight undergoes significant change.
